

ANDREW YAGA NOVIANTA

Software Engineering Student (RPL)

Denpasar | [+62 831-5547-6799](tel:+6283155476799) | andrewyaganovianta@gmail.com | [LinkedIn](#) | [Portofolio](#)

SUMMARY

Highly motivated 11th-grade Software Engineering (RPL) student at SMK TI Bali Global Denpasar and a RevoU Software Engineering Bootcamp participant. Passionate about Frontend Development and Data Engineering with a solid technical foundation in HTML, CSS, Vanilla JavaScript, C++, and Python. Proven ability to build practical applications, notably developing a minimalist To-Do List & Life Dashboard web application featuring dynamic task management and real-time features. Eager to combine academic and bootcamp training in an internship role to solve real-world challenges.

EDUCATION

SMK TI BALI GLOBAL DENPASAR

Aug 2025 - Present

Software Engineering (RPL)

Grade:87/100

PROJECTS

Software Engineering Project || RevoU CodingCamp

- Developed a simple and minimalist Life Dashboard web application using HTML, CSS, and Vanilla JavaScript, ensuring a lightweight and fully custom-built codebase without external frameworks.
- Designed an intuitive and aesthetically pleasing UI/UX layout focused on clean design principles to minimize visual clutter and enhance user focus and engagement.
- Implemented three core operational pillars, featuring a dynamic Task Management System, high-impact priority filtering for user focus, and a Quick Links section for seamless navigation to essential tools.
- Engineered dynamic front-end features, including a real-time system clock and date picker, custom user profile naming, a task sorting algorithm, and a smooth light/dark mode theme toggle.
- Applied efficient DOM manipulation and structural CSS formatting to deliver highly interactive, responsive, and performance-driven client-side user experiences.

Weather Web Application || Personal Project

- Developed a simple, minimalist Weather Dashboard web application using HTML, CSS, and Vanilla JavaScript, ensuring a lightweight, dependency-free, and fully custom-built codebase.
 - Designed an intuitive, clean, and user-friendly UI/UX layout focused on ease of use, minimizing visual clutter to allow users to quickly access critical weather insights.
 - Implemented core real-time data features, displaying current temperature, wind speed, humidity levels, real time celcius, and a dynamic system clock with an automated date tracker.
 - Engineered a multi-day forecast module to present multi-day weather predictions, providing users with actionable, forward-looking meteorological data.
 - Applied efficient DOM manipulation and structural CSS formatting to deliver a highly interactive, responsive, and performance-driven client-side experience across various devices.
-

COURSE & CERTIFICATION

Software Engineering CodingCamp || RevoU CodingCamp

- Mastered core software engineering fundamentals, focusing on logic structures, code execution workflows, and systematic problem-solving methodologies to write clean, efficient code.
 - Acquired foundational front-end development skills, training extensively in HTML, CSS, and Vanilla JavaScript to build interactive and structured web interfaces.
 - Developed practical algorithm implementation skills, translating complex problems into step-by-step programmatic logic and functional web solutions.
 - Cultivated an engineering mindset dedicated to continuous learning, expanding technical skill sets, and adopting best practices in modern web development.
-

TECHNICAL SKILLS

Frontend Web Developer

HTML, CSS, Javascript, API

Additional Skills

Figma, Postman API

SOFT SKILLS

Empathy, Communication, Teamwork, Attention to Detail, Problem Solving, Curiosity, Time Management and Self-motivated learner, Politeness
